## PERFECT QUALITY FROM THE BEGINNING TO THE END

**From top to bottom, from finish to base, from sidewall to inner shoulder, from simple to demanding. Indeed from A to Z:**

The HEUFT *canLine II* detects faulty beverage cans and removes them before they can slow down the productivity of the filling line and put the safety of the end product at risk. The system of the new generation carries out a precise empty can inspection and is extremely compact, highly automated and powerful. Whether simply top-down with an in-house developed intelli-

gent sensor camera and adaptive LED lighting or with an additional detection unit which also makes defects and contamination in the shoulder area, which is difficult to examine, visible: the HEUFT *canLine II* provides effective protection against closer blockages and product contamination by only allowing perfect cans which can be reliably filled to pass through.

up to  
**144,000**  
containers per hour

## HEUFT canLine II

A further developed empty can inspection based on the HEUFT SPECTRUM II for simply more product safety and productivity.

### Full productivity

Precise identification of deviations in shape such as the oval distortion of finishes and timely rejection of the respective cans for effective protection against blockages in the closer which slow down productivity.

### Full packaging integrity

Reliable top-down detection of indentations in the flanged edge as well as dents, defects, lacquer faults, contamination, residual oil and grease on the inside rim and inner walls as well as soiling and foreign objects on the base of the can. Optional extension for an all-around coverage of the shoulder area which is difficult to examine.

### Full coverage empty can inspection

Only one single, flexibly positionable top-down colour sensor camera with directly integrated LED lighting and image converter technology for a comprehensive flanged edge, inner wall and base inspection. HEUFT FinalView II technology with HEUFT reflex<sup>2</sup> image processing for eight views for a complete 360° inspection of the inner shoulder area which can be connected as an option.

### Full automation and full support

Modern HEUFT SPECTRUM II control unit with self-explanatory HEUFT NaVi user guidance for, among other things, fully automatic brand and program changes with audiovisual assistance.
